

Date Fixed	Problem	Resolution	Comment
11/22/2006	Temporary Employee unable to update due to employee number equal zero.	Updated DLL to verify that employee number not zero. If zero, error is displayed and user unable to access application.	Pitt County Only
	Please update documentation in the Success.net manual to show examples of filters in Create my own report.	Reports created	Documentation Only
3/9/2007	Change Success.net so that the certification period always shows a year minus a day . For example 35/07-3/4/08.	Updated review screen to ensure that one year or quarter used for calculations and not days in year or quarter.	1.3.0.1
3/9/2007	On the voucher screen in Success.net that once a voucher has a termination date in the termination field it becomes read only and once a provider is saved in the provider field it becomes read only. Note: If Facility name is "Update Facility Name", then the facility name can be changed. This allows for a care plan to be set up if the Facility has not been entered into SuccessNet yet using "Update Facility Name" and changing the facility name once entered into the system.	Updated voucher screen to ensure facility cannot be changed after saving. (Note: If Facility Name is "Update Facility Name", then the facility can be revised. This allows for a voucher to be entered prior to having the information for the facility entered in to SuccessNet.) Ensured that voucher could not be edited if termination date not null. Updated action notices appropriately.	1.3.0.1
3/9/2007	On the voucher screen, fix problem with more action notice being put into history for more than one care plan. For instance, if one care plan was changed for start date and another care plan was changed for voucher returned, an action notice would appear for both care plans pertaining to the start date action. This would only occur if more than one care plan was updated on the voucher screen.	Ensured that flags for changes were reset after each care plan processed.	1.3.0.1
